**AMENDMENT**

Assistant Commissioner for Patents,  
Washington, D.C.

Sir:

Responsive to the Official Action dated October 8, 2002, the time for responding thereto being extended for two months in accordance with a petition for extension submitted concurrently herewith, please amend the above-identified application as follows:

**IN THE SPECIFICATION**

Please replace the paragraph on page 4, lines 16-22, with the following revised paragraph:

C1  
One particularly preferred modification is the addition of a fluorescent label to the enzyme, typically via a cysteine residue. If the wild-type protein lacks a suitable cysteine residue (e.g. the NDPK of *Myxococcus xanthus* (SEQ ID NO: 1)), this can easily be introduced by mutagenesis [e.g. 19]. A suitable position for mutation can easily be determined by the skilled person, whilst ensuring that the mutation does not disrupt the enzymatic activity [e.g. 20]. At any given amino acid residue, particular labels may give better results than others. Suitable combinations of label and residue can be determined by routine experimentation.
